Description. A groundbreaking approach to neural mobilization, this one-of-a-kind resource draws on the established Maitland movement diagram to present a completely new system for mobilization of the neural and musculoskeletal systems. The text guides readers through the complex subject of neurodynamics and the basic mechanisms in movement of the nervous system, systematically linking causal mechanisms to diagnosis and treatment of pain and common musculoskeletal problems.

Clinical Neurodynamics is a system of evaluating and treating nerve tension and restrictions. It makes use of the fact that the nervous system is intricately connected throughout the body, with attachments at all ends. Nerves attach to connective tissue within the central nervous system via meninges.

Clinical neurodynamics is the application of nervous system mechanics and physiology and how they interact with the musculoskeletal system. As the musculoskeletal system creates movement, the nervous system accommodates these movements through a variety of movements, such as elongating, sliding, or compressing.
