Heart Failure And Palliative Care

Traditional medical care for heart failure (HF) is aimed at improving heart function and/or delaying progression with medications, and managing symptoms. People with HF are at risk for sudden clinical decline or cardiac death. Good communication is important to identify an individual's goals of care including end-of-life issues. 1 Palliative and hospice care are both options that should be ...

Palliative and Hospice Care for Heart Failure

Palliative care, sometimes now referred to as supportive care, is specialized care that focuses on improving quality of life (QOL) through relief of stress and symptoms for patients with serious illness. 1 While most often associated with oncology, palliative care is appropriate for any patient in the advanced stages of illness, including patients with heart failure (HF).
