It's easy to search Wikibooks by topic, and there are separate sections for recipes and childrens' textbooks. You can download any page as a PDF using a link provided in the left-hand menu, but unfortunately there's no support for other formats. There's also Collection Creator – a handy tool that lets you collate several pages, organize them, and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

I just bought a 95 Kawasaki Mule 500 for around the house and it runs great but seems really low on power. Having never been in one before I was wondering if something wrong or that is just how it is. It will pull me up a steep hill, but at about 3 mph max and it seems like it is almost wanting to stall.

I have three Mule 500's given to me all KAF300b They all need to be gone through. I need to know about the ignition system. They have stators with two yellow wires and a coil with plug wire and one black wire that I assume is to kill the coil when grounded? Will they run stand alone with just a good coil? I don't see an igniter on any of them.
