The failure was also a blow to the reputation of its creator, Sam Williams, now 84, who essentially invented the small turbofan engine in the 1960s and remained its unchallenged mastermind for more than three decades. Williams wasn't the first to build a tiny jet engine. Back in the early 1950s, ...

The Little Engine That Couldn't | Flight Today | Air ...

First, piston engines are more efficient than turboprops, so their operational cost are lower.This also means that the system mass (engine plus fuel) for a trip is lower once you go beyond small ranges. In a helicopter, the engine mass is more important, because average flight times are much shorter, so you find many helicopters with turbo engines and only few with pistons.
